

Amendments to the Specification

Please amend the paragraph at page 10 lines 10 – 17 to read as follows.

Accordingly, ~~in one non-limiting embodiment of the present invention there is provided~~ provides image display apparatus comprising projector means, a first light source, at least one primary modulator for modulating light from the first light source, a second light source, optical means for combining light from the second light source with the modulated light from the at least one primary modulator, and an auxiliary modulator for modulating the combined light from the second light source and the modulated light from the at least one primary modulator.

Please amend the two paragraphs at page 3 lines 10 – 17 to read as follows:

The image display apparatus may be one in which the at least one primary modulator is driven by ~~a combination of an output channels~~ channel from the ~~an~~ image generator, and the auxiliary modulator is ~~also~~ driven by a ~~combination of separate output channels~~ channel from the image generator.

The image display apparatus may be one in which the at least one primary modulator is driven by a combination of output channels from the ~~an~~

image generator, and the auxiliary modulator is also driven by a combination of output channels from the image generator.
